SISTEMA NOOK

2026

NOOK SYSTEM

Nook columns are the ideal solution for those seeking functionality and design in the kitchen. These innovative systems, characterised by an elegant concealed door, conceal multiple solutions inside. Appliances such as the oven, fridge and microwave integrate perfectly, optimising space and maintaining a clean, linear aesthetic. The internal organisation is also designed for maximum practicality with drawers and deep drawers.

INSTRUCTIONS AND VIDEO

Also available is the “Skip-N” pull-out worktop version. This additional option transforms your column into a real workstation, perfect for preparing meals or just as a temporary storage surface, disappearing with a simple gesture when no longer needed.

 Non realizzabile fuori misura
Not feasible in custom sized

Tipologie piastre di copertura

Types of covering plates

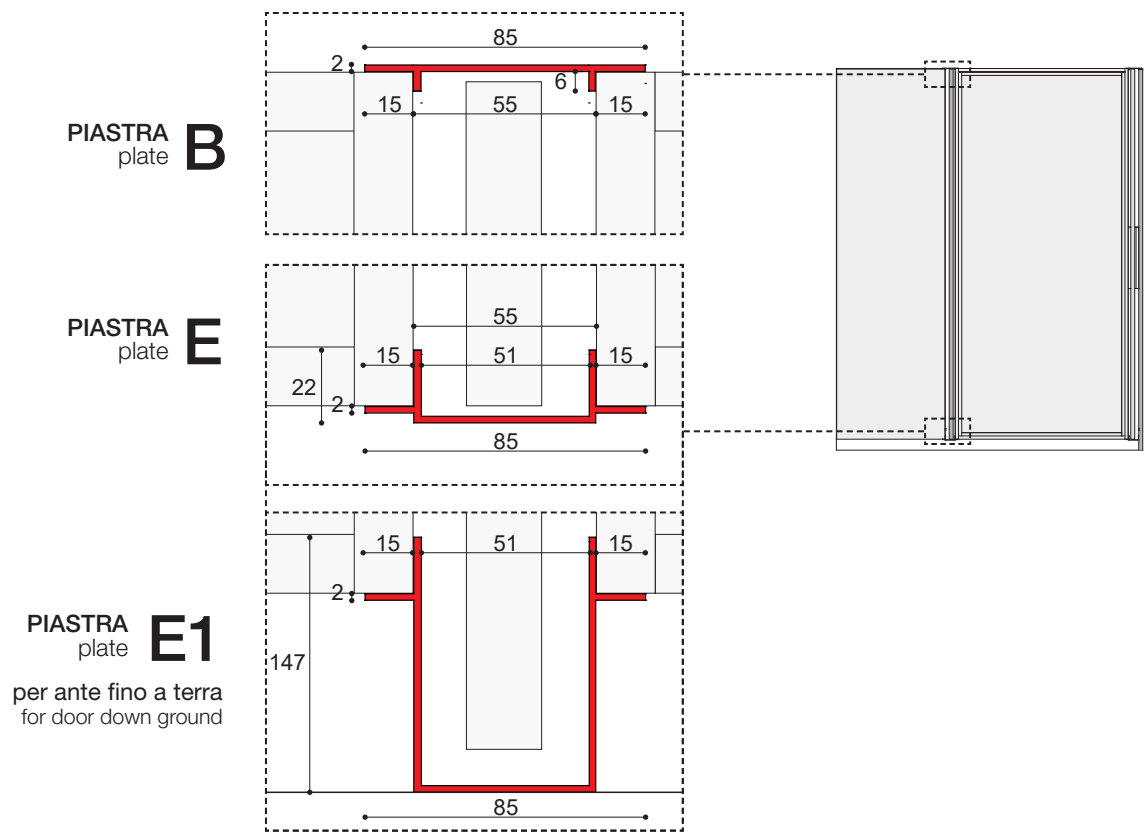

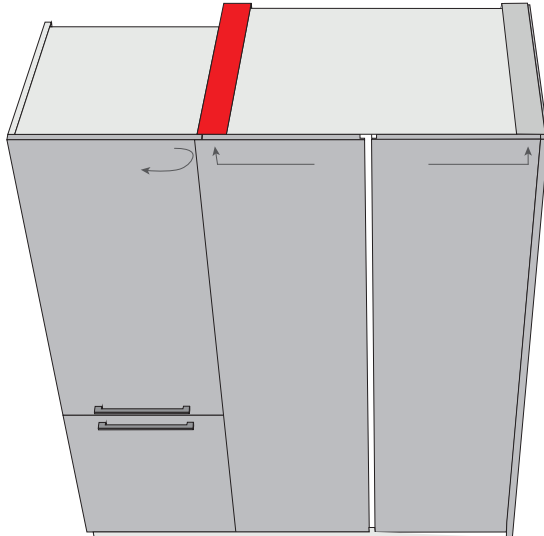

Colonna Nook singola con anta di finitura laterale
Single Nook column with lateral finishing door

⚠ Le piastre singole “A+D” o “A+D1” (per ante fino a terra terminale), sono obbligatorie in presenza di un fianco fino a terra terminale e permettono la scomparsa nella sede laterale di un’unica anta.
The single plates “A+D” o “A+D1” (for doors down to ground), are always obligatory in the side with retractable door in the presence of a terminal side panel down to ground and allows the disappearance in the side seat of a single door.

⚠ È sempre obbligatorio inserire un fianco fino a terra terminale nel lato con anta rientrante, sia esso terminale a vista che a parete.
It is always obligatory to insert a ground terminal side panel in the side with retractable door, whether it is an exposed or wall-mounted panel.

Colonna Nook + Colonna standard Bridge/Head
Nook column + Standard column Bridge/Head

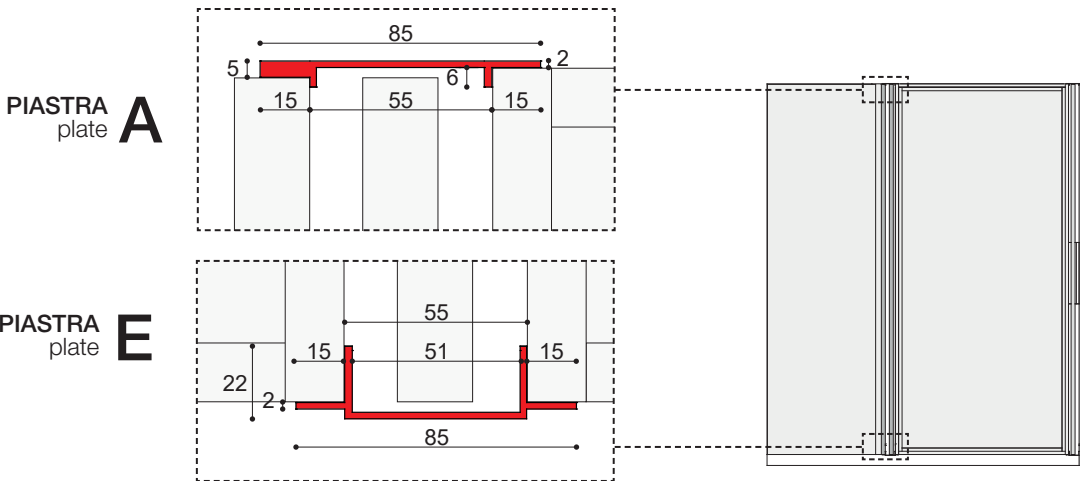

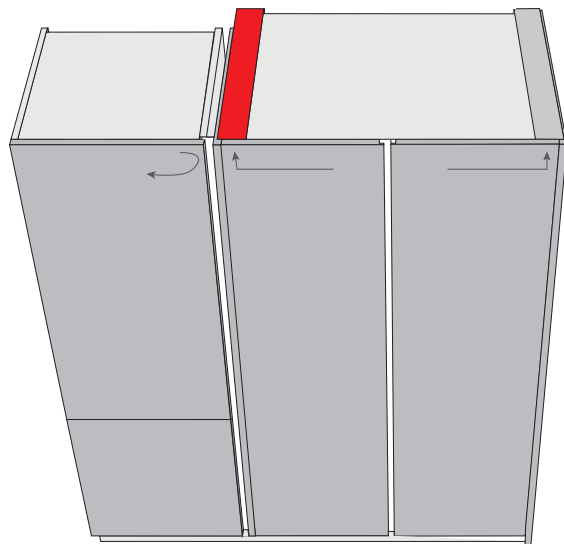

⚠ Le piastre singole “B+E” o “B+E1” (per ante fino a terra), sono obbligatorie tra una colonna Nook e una colonna standard Bridge/Head nel lato dell’anta rientrante e permettono la scomparsa nella sede laterale di un’unica anta.
The single plates “B+E” or “B+E1” (for doors down to ground), are obligatory between a Nook column and a standard column Bridge/Head in the side with retractable door and allows the disappearance in the side seat of a single door.

Tipologie piastre di copertura

Types of covering plates

Colonna Nook + Colonna standard Neck/Easy/Lux

Nook column + Standard column Neck/Easy/Lux

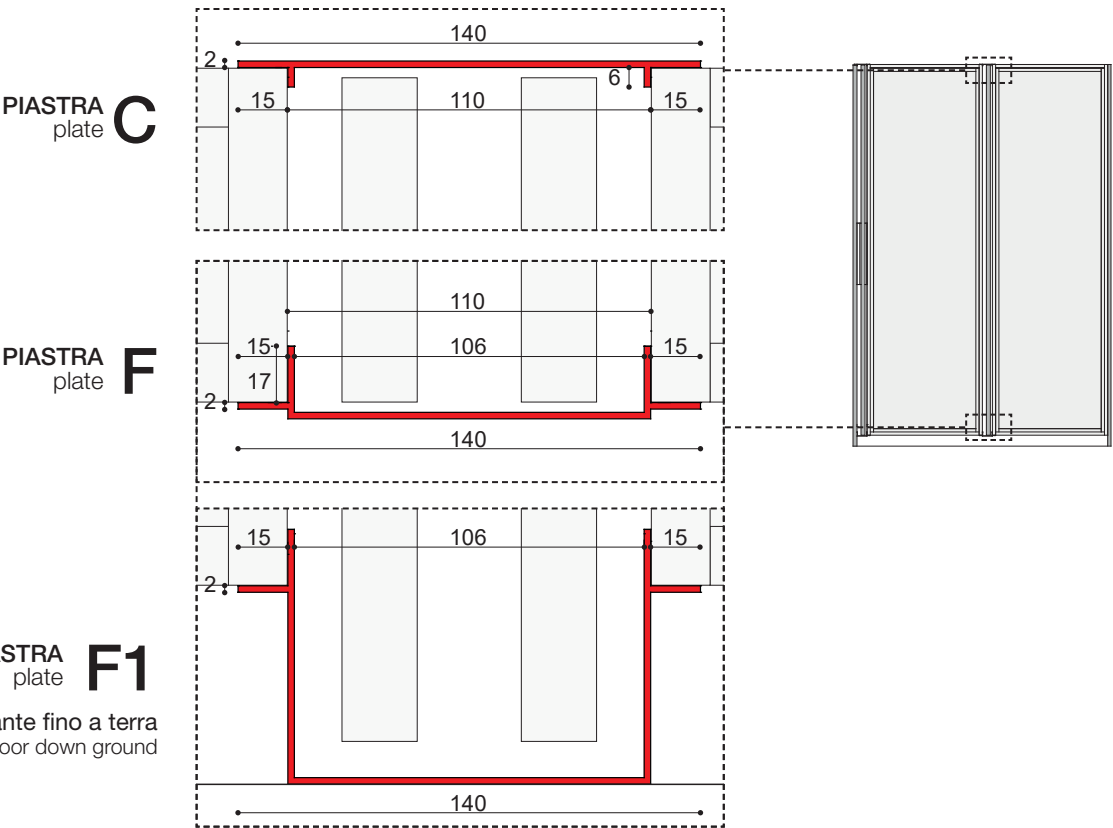

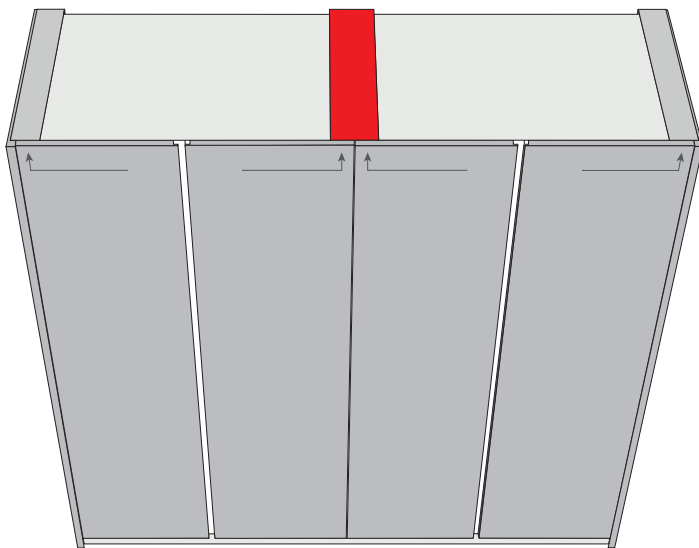

⚠ Le piastre singole “A+E” sono obbligatorie tra una colonna Nook e una colonna standard Neck/Easy/Lux nel lato dell’anta rientrante quando la gola è affiancata alla colonna Nook. In questo caso è obbligatorio inserire la gola + il fianco come anta dalla colonna standard. Se invece la colonna standard ha la gola dal lato opposto alla colonna Nook occorre inserire le piastre B+E (come la soluzione colonna Nook + colonna standard Bridge/Head).

The single plates “A+E” are obligatory between a Nook column and a standard column Neck/Easy/Lux on the recessed sash side when the groove is flanked by the Nook column. In this case, it is mandatory to insert the finger rail + the side panel saem as door from the standard column. If, on the other hand, the standard column has the finger rail on the opposite side to the Nook column, it is necessary to insert the “B+E” plates (like the Nook column + standard Bridge/Head column solution).

Colonna Nook + Colonna Nook

Nook column + Nook column

⚠ Le piastre singole “C+F” o “C+F1” (per ante fino a terra), sono obbligatorie tra due colonne Nook in caso di accosto di due ante a scomparsa che rientrano nella stessa sede laterale.

The single plates “C+F” or “C+F1” (for doors down to ground), are obligatory between two Nook columns when two retractable sashes are pulled over and fall into the same side seat.

⚠ Le piastre singole “B+E” o “B+E1” (per ante fino a terra), sono invece obbligatorie tra due colonne Nook nel caso in cui le ante a scomparsa non sono in accosto tra di loro, ma rientrano ognuno nella propria sede laterale.

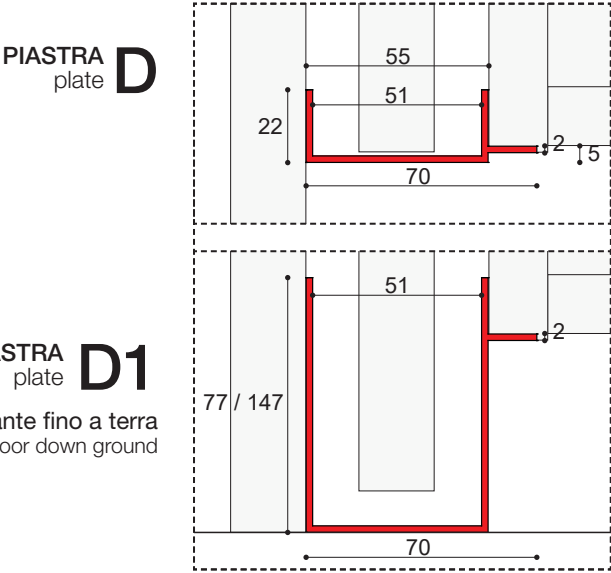

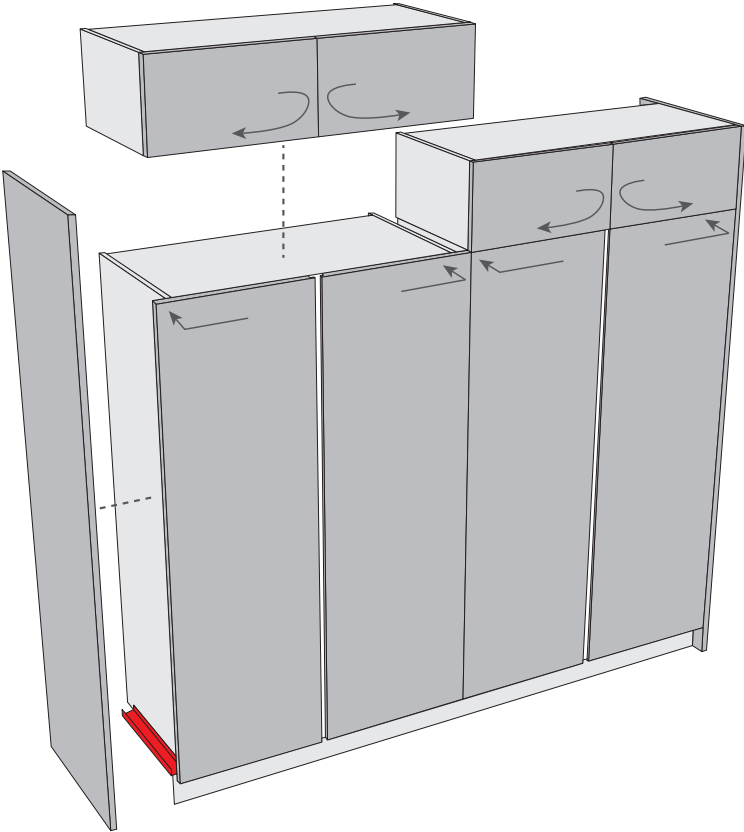

The single plates “B+E” or “B+E1” (for doors down to ground), are obligatory between two Nook columns in cases where the retractable doors are not in close proximity to each other, but each retracts into its own side seat.

Tipologie piastre di copertura

Types of covering plates

Sopracolonne Nook

Nook topcolumns

 In presenza di elementi sopracolonna Nook, non vanno installate le piastre singole e doppie superiori. Inserire solo le piastre singole inferiori "D" o "D1"/ "E" o "E1", quelle doppie inferiori "F" o "F1" e i fianchi terminali dell'altezza corretta in base ai moduli superiori.
In the presence of Nook topcolumn elements, the upper single and double plates should not be installed. Insert only the lower single plates 'D' or 'D1'/'E' or 'E1', lower double plates 'F' or 'F1', and end sides of the correct height according to the upper modules.
